

DOCUMENT-IDENTIFIER: US 6370582 B1

TITLE: Method and system for providing cross-platform remote control,  
monitoring, and up-dating of a facility access controller

----- KWIC -----

DEPR:

The firmware of each terminal control unit 22 typically handles the following functions: storing a list of unique digital information codes in the memory device 50 corresponding to identification token/numbers or biometric templates; comparing the stored digital code against presented identification token/codes; storing operating parameters to process and grant or deny access for parameters such as time zone parameters; holiday dates; access levels; personal identification numbers (PIN); and start and expiration date parameters.
